1. Complemento SonarQube para Flutter/Dart

Para analizar el proyecto Squirtle se requiere instalar de un complemento SonarQube para Flutter/Dart que se encuentra en el siguiente repositorio .

1.1. Instalación del plugin Flutter/Dart

Colocaremos el complemento descargado en la carpeta plugins de sonarqube-7.9.4.

1.2. Configuración del proyecto

Creamos un archivo sonar-project.properties en la raíz del proyecto con este contenido:

```
# Project identification
sonar.projectKey=flutter_rocks
sonar.projectName=Flutter Rocks
sonar.projectVersion=1.0

# Source code location.
# Path is relative to the sonar-project.properties file. Defaults to .
# Use commas to specify more than one folder.
sonar.sources=lib
sonar.tests=test

# Encoding of the source code. Default is default system encoding.
sonar.sourceEncoding=UTF-8
```

1.3. Ejecución de Análisis

Finalmente utilizamos los siguientes comandos de la carpeta raíz para iniciar el análisis:

```
# Download dependencies
flutter pub get
# Run tests
flutter test --machine > tests.output
# Compute coverage (--machine and --coverage cannot be run at once...)
flutter test --coverage
# Run the analysis and publish to the SonarQube server
sonar-scanner
```
